Verification of Nonfiling (VNF)

- IRS documents that clearly indicate that the IRS does not have a tax return record on file for the tax year are acceptable for VNF.

- Verification of nonfiling from the IRS must be provided for (1) independent students (and spouses, if applicable) and parents of dependent student who did not file and are not required to file a 2018 income tax return and (2) individuals who are required to file a 2018 IRS income tax return but have not filed because they have been granted a filing extension beyond the automatic six-month extension.

- IRS data field flags identify what, if any, information was changed
- IRS DRT is mobile ready

• The IRS Data Field Flag will be “2” – Field changed by user prior to submission of application.

• To complete verification of this item, collect a signed statement certifying that the untaxed pension or IRA distribution contained a rollover.
Amended Tax Returns 2020-2021

Verification Rates
Verification Rates

- Using a new Machine Learning Model (MLM) to choose FAFSA filers for verification.

- A smarter model for choosing FAFSA filers.

- Traditionally, around 30% of FAFSA filers overall were chosen for verification. Since October 1, 2018, around 22% of filers were chosen for verification.

- Selected about 900,000 fewer FAFSA filers for the 19-20 FAFSA when compared to the 18-19 FAFSA.
Why choose 22% of FAFSA filers for verification?

• A cost-benefit analysis showed that verifying 22% of FAFSA applicants resulted in the highest return in improper payments.

• Verifying the riskiest of filers means the return in improper payments prevented is greater than the cost.

• Results in reduced improper payments AND reduced burden to colleges and universities AND reduced burden to students and families.
Verification Rates

How do we get to a lower selection rate?

• The Machine Learning Model (MLM) chooses FAFSA filers based on a risk score.

• FSA also chooses a small sample to be a control group and a random sample as a treatment group.

• Overall selection rate is just over 22%.
Why didn’t FSA lower the verification rate sooner?

- Verification is a balancing act between burden on students and families, the need to limit improper payments, and being mindful of the administrative burden on colleges and universities.

- Improper payments are defined as a FAFSA filer getting more OR less federal aid than they are eligible to receive due to error.

- Only with the new technology of the Machine Learning Model could FSA lower verification rates while controlling improper payments.
How did the new model do on the recovery of improper payments?

- The MLM model prevents the same percentage of improper payments as the previous model, while verifying far fewer applicants.

- FSA’s conservative estimate indicates that the reduction in the verification rate has reduced the burden on colleges and universities.
Verification Rates

What impact did the reduction of verification rates have on verification melt?

• Verification melt is the term used when a FAFSA filer chosen for verification drops out of the process and thus, is not able to access federal aid.

• FSA estimates verification melt to be 11% of filers chosen for verification, but other estimates put verification melt higher.

• When fewer filers are selected for verification, verification melt decreases as well.
Verification Rates

What is the impact of a reduced verification rate?

- Verify about 900,000 fewer FAFSA filers for the 19-20 FAFSA in comparison to the 18-19 FAFSA.

- A verification melt rate of 11% means that nearly 100,000 (99,000) more students may continue the process and receive federal aid that helps them to access higher education.

- If the verification melt rate is higher (some estimates put it as high as 25%) that number climbs to 225,000 students who will now access federal aid to fund their postsecondary education.
Verification Rates

What are FSA’s goals for verification?

• Reducing the burden of verification on institutions, and on students and families while responsibly controlling for improper payments.

• Machine Learning Model is retrained every year.
